Ranjith Iyer

B.Tech Student · Computer Engineering

PERSONAL DETAILS

Address: Dombivli, Thane District, Maharashtra
Contact: +91 99877 12463
Email: jayalakshmyramaswamy@gmail.com
LinkedIn: linkedin.com/in/ranjith-iyer-18187a3a1

CAREER OBJECTIVE

Motivated fourth-year Computer Engineering student with a strong foundation in Python, machine learning, data analytics, and data engineering. Passionate about building AI-driven solutions that solve real-world problems. Seeking an internship or entry-level opportunity to contribute to innovative projects, collaborate with cross-functional teams, and grow as a software engineer and AI practitioner.

QUALIFICATION

B.Tech – Computer Engineering *2023 – 2027 (Expected)*
Pillai College of Engineering, Maharashtra

PROJECTS

1. Loan Eligibility Prediction Using Machine Learning *Python · Scikit-learn · Flask · Pandas · NumPy*

- Built an end-to-end prediction system with preprocessing (missing value handling, feature scaling, categorical encoding) and trained a Logistic Regression model for credit risk classification; deployed as a Flask web app for real-time loan approval.

2. AI-Based Grievance Redressal System *Next.js · MongoDB · Groq API (LLaMA 3) · Vercel*

- AI-powered complaint management platform using NLP for classification, urgency detection, and semantic duplicate identification; role-based dashboards, anonymous submission, real-time tracking, SLA-based escalation, and AI complaint assistant.
- Improved institutional transparency, resolution speed, and data-driven decision-making.

3. Strata – Web Archive & Change Detection System *Node.js · SQLite (FTS5) · SSE · Vanilla JS · Render*

- Built a web memory tool that crawls websites (robots.txt, gzipped sitemaps, breadth-first link walking, canonical and redirect handling) and stores a new page version only when the main readable text changes, using SHA-256 fingerprinting to avoid false changes from navigation, footers and timestamps.
- Implemented a time machine with version timelines, inline and side-by-side word-level diffs, and replay of archived pages; added a change feed, SQLite FTS5 full-text search across the full history, and a link doctor that flags broken links and offers preserved copies.
- Delivered a zero-dependency app with live crawl progress via Server-Sent Events, scheduled re-crawls, crash-safe resume, ZIP export of archives, and a single-page dashboard with custom SVG charts; deployed on Render. github.com/ranjith5509/strata

SKILLS

Language: Python, C, Java, HTML, CSS, JavaScript, Node.js, Networking
Database: MySQL, PostgreSQL, SQLite, MongoDB
Operating System: Windows, Linux
Other Tools: GitHub, Power BI, Microsoft Excel
Soft Skills: Leadership, Time Management, Attention to Detail, Problem Solving, Critical Thinking, Communication, Team Collaboration, Adaptability

CERTIFICATIONS

- Microsoft Power BI: The Complete Guide
- Google DeepMind AI Research Track – Foundation

DECLARATION

All the information provided above is true to the best of my knowledge and belief.
